EXPERIENCE

UNDERGRADUATE RESEARCH | Assistant

May 2024 - Present | Madison, WI

- Used EEG-data to create Bayesian Networks of brain connectivity, modeling graph measures of the BNs resulted in ROC's of up to 0.88
- Performed topological data analysis on matrices derived from neural time series to compute temporal features with predictive power
- Performed time-to-event analysis on EEG data, optimizing a 72-hour prediction window to identify predictors of seizure recurrence

MULTI-INSTITUTIONAL EEG FORECASTING | Researcher

Sep 2024 – Present | Partially Remote

- Collaborated with Beth Israel Deaconess and UW–Madison to forecast epileptiform activity using large-scale EEG data
- Queried and joined >30 TB of neural time series and metadata on AWS S3 with Excel-based subject logs using Apache Spark
- Tuned & optimized a deep temporal embedding model in PyTorch to compress high-dimensional EEG time series into vector space
- Applied UMAP on learned embeddings to generate low-dimensional features for seizure risk classification up to 11 hours ahead
- Engaged in biweekly cross-institutional code reviews and research presentations to improve model quality and interpretability

UW–MADISON STATISTICS DEPARTMENT | Course Helper

Jan 2024 – Present | Madison, WI

- Collaborated with faculty to develop an instructional R package for first-year statistical programming students
- Designed an interactive interface for students to upload data and visualize a plethora of regression techniques from their curriculum
- Implemented methods including Tukey's biweight and quantile regression to illustrate robustness under heteroskedasticity
- Optimized the package for clarity and reproducibility in classroom settings; tested cross-platform compatibility (Windows, Mac, Linux)

PROJECTS

UW DEPARTMENT OF STATISTICS | R-Package "robust"

January 2024 – Summer 2024 | UW-Madison

- Created an R Package for statistics students to input their own data files and visualize a selection of robust regression techniques
- Created a simple and easy-to-use interface for statistics students, optimized for ease of use, student understanding, and course content
- Used Tukey's biweight and quantile regression to teach model robustness under non-normal errors and heteroskedasticity

DOTDATA HACKATHON | Geospatial Risk Modeling

March 2022 | Madison, WI

- Led a multidisciplinary team to develop a road safety prototype during a city-scale traffic analytics hackathon
- Applied unsupervised learning to geospatial data from Chicago to identify high-risk zones using multi-dimensional clustering
- Built a driver alert system that discretely notifies users when entering predicted risk zones to enhance road safety

EDUCATION

UNIVERSITY OF WI-MADISON

B.A. Data Science
May 2025 | Madison, WI
M.S. Data Science
May 2027 | Madison, WI
Dean's List Spring 2024

SKILLS

PROGRAMMING

2.5+ years:
Python • R
2+ years:
SQL • MATLAB
0.5+ years:
C • C++ • Julia

TECHNOLOGY & TOOLS

Data & ML: Python, R, SQL, CQL, Pandas, NumPy, SK-Learn, TensorFlow, PyTorch
Distributed Systems: Spark, Apache Kafka, AWS, Docker
Visualization: Tableau, Matplotlib, Seaborn, Google Data Studio
DevOps & Workflow: Git, GitHub, GitLab, Jupyter, VS Code

KEY COURSES

Big Data Systems
Machine Learning
Database Design
Artificial Intelligence

CERTIFICATES

Google Data Analytics
Supervised Learning Algorithms
Udemy Python Bootcamp: Zero-to-Hero
Udemy SQL Bootcamp: Zero-to-Hero
